

Common Symptoms of Peripheral Arterial Disease (PAD):

- Intermittent claudication of the legs
- Leg and muscle weakness
- Numbness or tingling sensation
- Weak pulse in legs
- Cold extremities
- Non-healing wounds

1 in 3 Americans over the age of 50 with diabetes are likely to have PAD.

PAD affects a shocking **12-20%** of Americans age 65 or older.

Untreated, PAD can lead to **CLTI (Critical Limb Threatening Ischemia)** and **amputation**.

People with PAD have a **4-5x GREATER RISK** of a heart attack or a stroke.

Early identification and management of patients with **PAD** can **improve quality of life**,

save limbs & reduce cardiovascular events.
